Mr. Girish Sachdeva, Sachdeva Automobiles

"Excellent System, Intelligent Support".

Mr. Ajit Kamrani, Dayaram Santdas & Co.

"God Bless you!"

Ms. Shashiben Jani, Adarsh Service Station

Fuel Plus™

Complete Software Solution for Petrol Pumps

[Fuel Plus™ is a simple yet powerful software specially designed for petrol pumps. It integrates all the activities of a pump into one seamless system]

Fuel Plus™ has been designed after a thorough study of the petrol pump business by a team of experienced professionals headed by a Chartered Accountant. The study has taken into account the best business practices in the industry including those of the ISO 9002 certified retail outlets. The system has been enriched by the vast knowledge & understanding gained by the team over the years. The team comprises of qualified professionals including Chartered Accountants, MCA & Cost Accountants who are in the field of developing customized solutions since 11 years. The system design is contemporary having features like Multi-entry voucher system, Multi-user (LAN) support & Multi-division support.

Fuel Plus™ is being used by the best in the industry:

Adarsh Service Station

First petrol pump in India to be started by a lady & the highest M.S. selling outlet

R. S. Vatcha & Co.

First to be accredited with ISO 9002 in India

Dayaram Santdas & Co.

First to computerize its operations in India

Guru Nanak Automobiles

Winner of Jamnalal Bajaj award for fair business practices

The books of account generated by the system are well accepted by the auditors & the government authorities. The listings & reports are extensive & intuitive providing good information for operational & managerial uses e.g. we have a report to track the dormant credit customers.

Further, the system design is very strong, making it easy to add new features to the system. e.g. when petro-cards were introduced, we implemented perfect petro-card accounting at our clients without making any change to the software. It is, in a way, future proof.

In any case, if required, new reports can be added to the system with relative ease to meet your purpose.

Utmost care has been taken to prevent mistakes made by the users, so that your data is always correct. e.g. the user is not allowed to enter a coupon of one customer into another customer's account.

Every user has login id, password & menu rights. He cannot operate a module not allowed to him. e.g. you may give the credit sale coupon entry rights to a person but not the bank receipts against bills. This prevents anybody from misusing the system or gaining access to any confidential data/report.

The user-friendly system is backed by superb support from qualified personnel. Our training is outstanding ... we have even trained under-graduates to handle complete accounting. In fact, some of our clients finalize their accounts within one week after the year-end ... every year.

We don't give just Software ... we give Solution. We set the system according to the user's needs and closely monitor its proper implementation & use. Our clients also get guidance on setting up proper systems for sales, accounting & other areas. We believe in giving our best.

Exhaustive & Scalable | Good controls & integrity | User Friendly | Excellent Support & Guidance
